

Cyber Loss Mitigation Services

SME network vulnerability monitoring and cyber threat detection

In partnership with Amplify Intelligence

Reduce the likelihood of cyberattacks with a bank-grade cybersecurity solution for your SME business. Plug into the 'brAIIn-box' to benefit from a cyber threat monitoring service enabled by artificial intelligence that produces actionable network security advice.

Programme Overview

Chubb policyholders will receive one month free on a 12-month 'Starter' plan for brAIIn-box by Amplify Intelligence. brAIIn-box will connect to your network or cloud infrastructure and integrate with the Amplify Intelligence global threat detection service. It will monitor your network for malware, ransomware and hacker activity. With the help of machine learning models, it can detect evolving threats specific to your industry or location.

Benefits

- 'brAIIn-box' has bank-grade capabilities beyond the reach of most IT providers
- It identifies how computers in your network are communicating sensitive data and interacting with internet sites that are known to be compromised
- Continuous vulnerability scans to identify the devices in your network and their risk of compromise from cyber attack
- Receive actionable advice to help defend your network and improve cyber resilience
- Track software updates and know when to decommission old software
- Receive a monthly snapshot of your cyber threats and a progress report on how well you are doing in reducing your cyber risk
- Provide evidence for compliance of security controls and the continuous identification of gaps in your cybersecurity

Find out more

Policyholders can sign up for SME network vulnerability monitoring and cyber threat detection on the [Chubb website](#).
