

Ergonomics Checklist for Your Home Office

This ergonomics self-assessment can help you set up a home office and establish work habits that keep you comfortable and productive. If you answer “NO” to any of the questions, consider making the necessary adjustments to reduce your chances of sustaining work-related injuries, such as tendonitis or carpal tunnel syndrome.

You can use this checklist on a regular basis to evaluate your workspace and practices.

Office Chair and Desk	Yes	No
Can you adjust the height of your chair?		
Does your chair support the curve of your back?		
Is your chair sufficiently padded?		
Does your chair have armrests that can be set just below your elbow?		
Is your chair adjusted so that your knees bend at a 90-degree angle and your feet are placed flat and firmly on the floor? (Or do you use a footrest if your feet don't comfortably reach the floor?)		
Are your chair and desk adjusted so that when you sit, your arms bend at a 90-degree angle to reach your keyboard and mouse?		
Do you have an adjustable height desk or desk riser that allows you to alternate between sitting and standing during your workday?		
Is there ample room under your desk for your legs?		
Keyboard, Mouse, and Monitor	Yes	No
Are your keyboard and mouse set at the right height, so they can be reached without extending your arms beyond a 90-degree angle at the elbow?		
Do have a full-size keyboard with ergonomic features if needed?		
Is your mouse comfortable to use all day long without straining your hands or wrists?		
Is your monitor placed at arm's distance?		
Is the top of your monitor set at eye-level?		
Is your monitor tilted slightly upward to cut down on glare?		
If your workstation is near a window, is your monitor positioned perpendicular to the window?		
Do you have a telephone headset for hands-free calls?		
If you use a laptop, do you have a laptop stand, external mouse, and full-size keyboard so that you can maintain a comfortable position for a full day of work?		

Ergonomic Work Habits	Yes	No
Do you sit with your back straight, feet flat on the floor or a footrest, and your shoulders square?		
Do you vary your working position between sitting and standing throughout the day?		
Do you stand—at least sometimes—when you're on the phone?		
Do you change your work position or move at least once per hour?		
Do you take breaks to stretch during the workday? (See Chubb's stretching examples .)		
Do you stretch your hands, wrists, and fingers each day?		
Every 20 minutes, do you turn away from your computer monitor and look at something 20 feet away for 20 seconds?
