#### (c) Estimation of fair values

#### Fair value hierarchy

Included in the quoted market price category are financial instruments that are measured in whole or in part by reference to published quotes in an active market. A financial instrument is regarded as quoted in an active market if quoted prices are readily available from an exchange, secondary market via dealer and broker, pricing service or regulatory agency and those prices represent actual and regularly occurring market transactions on an arm's length basis (Level 1).

Financial instruments measured using a valuation technique based on assumptions that are supported by prices from observable current market transactions are instruments for which pricing is obtained via pricing services but where prices have not been determined in an active market and instruments with fair values based on broker quotes (Level 2).

Financial instruments that are valued not based on observable market data are categorised as Level 3.
