

CASE STUDY

Lights, Camera, Resilience: Protecting a Studio from Wildfire Risks

Client Challenge

A major studio facility faced significant wildland fire risks due to its proximity to natural vegetation and a national forest, combined with structural vulnerabilities and a lack of a comprehensive wildland fire defense strategy. Key issues included insufficient vegetation management, combustible materials, susceptibility to ember intrusion, and inadequate fire response planning. The threat of wildfires posed a critical challenge to the safety of the property, its operations, and its assets. Despite current efforts, several critical vulnerabilities persisted.

Our Approach

Chubb Resilience Services conducted a site visit and climate model review, providing 12 prioritized recommendations to help enhance wildfire resilience and meet insurability requirements. Key actions included creating defensible space, improving structural fire resistance, and enhancing response capabilities. Recommendations included removal of vegetation growth on building, mesh covering of vents and intumescent coating of exposed wood on backlot sets.

The Outcome

Implementing these measures should help strengthen the Studios' wildland fire resilience ensure the safety of the property and operations while safeguarding long-term success and continuity. The proactive measures aim to balance operational needs with the imperative to reduce wildland fire vulnerability to help ensure continued safety and success.

Chubb Resilience Services

Chubb provides a flexible and tailored approach to resilience, meeting clients where they are today and where they aim to be. Combining extensive risk management experience with cutting-edge climate models and engineering expertise, Chubb provides valuable insights and actionable recommendations for navigating climate risks. Chubb quantifies the financial impact of potential losses and mitigation measures, empowering businesses in their strategic decision-making.

Whatever the future holds, your property should be ready for it.
